

SOLANA MOBILE · CLOCK IN HACKATHON

Solarchik

A little solar robot on your rooftop.
Run, **clock in on Solana**, every day.

Native Kotlin Android app · v0.22.3 · Solana devnet

Vadym Bilobrovets — solo founder, team Solar DePin

Rooftop after today's CLOCK IN · streak 1 (v0.22.3)

THE PROBLEM

Crypto on phones is a dashboard you open once and forget.

No daily reason

Most wallet apps give you nothing to come back for tomorrow. Habits live in games and everyday tools.

Scary first step

New people hit wallet installs, seed phrases and fees before they see anything fun.

On-chain feels invisible

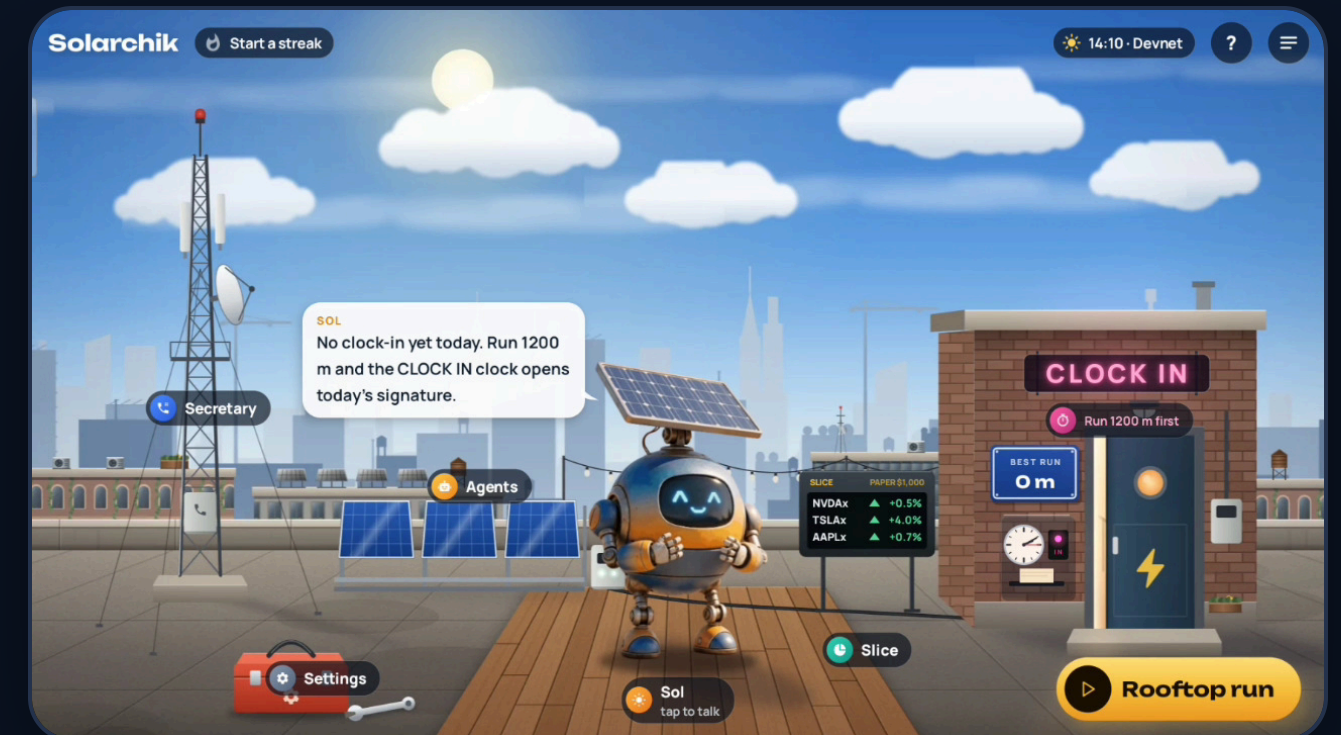

Even when something is signed, people rarely see what happened or why it matters.

I wanted one small habit — **show up, run, clock in** — that is fun on its own and quietly real on Solana.

SOLARCHIK

One rooftop. Everything around it.

- **Runner game** tuned for 90/120 Hz screens
- **Daily CLOCK IN** signed on Solana devnet, with a streak
- **Agent NFTs** on Metaplex Core — free mint, Pro for 0.1 SOL
- **Sol**, an AI friend with voice, changes agent strategies for you
- **Phone secretary** on a real +380 number: notes, transcripts, call back
- **Slice**, a paper portfolio of tokenized stocks (simulated)
- Guided tour + 60-second judges tour · Ukrainian / English

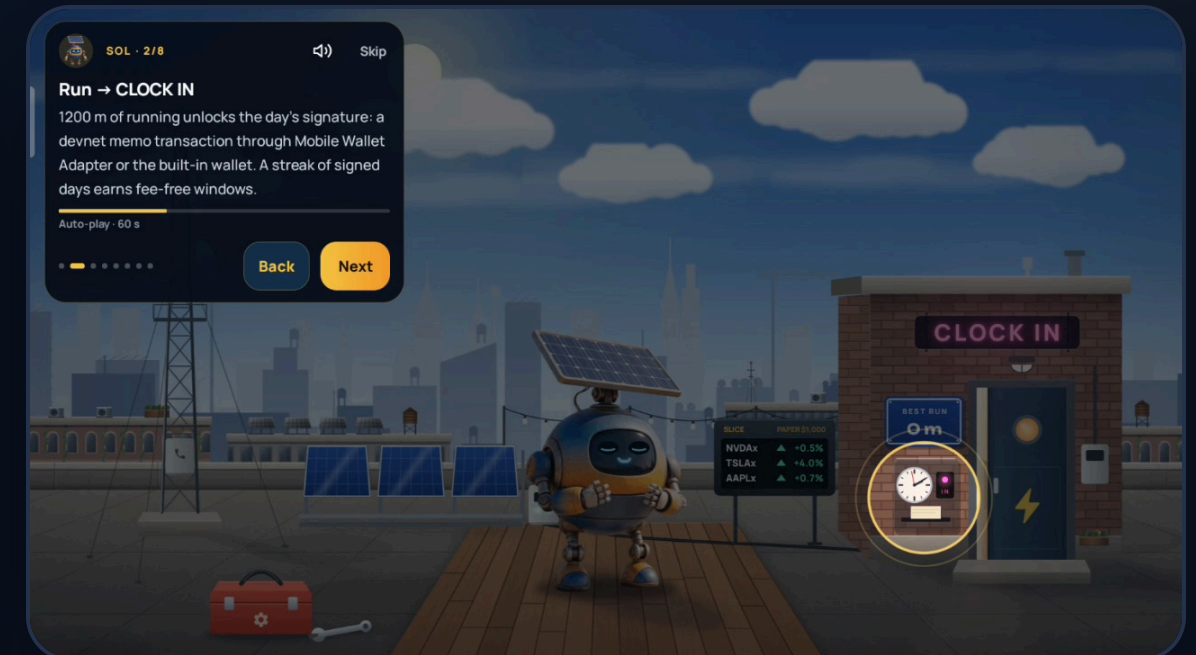

Rooftop home (v0.22.3 build)

DEMO · ROOFTOP & TOUR

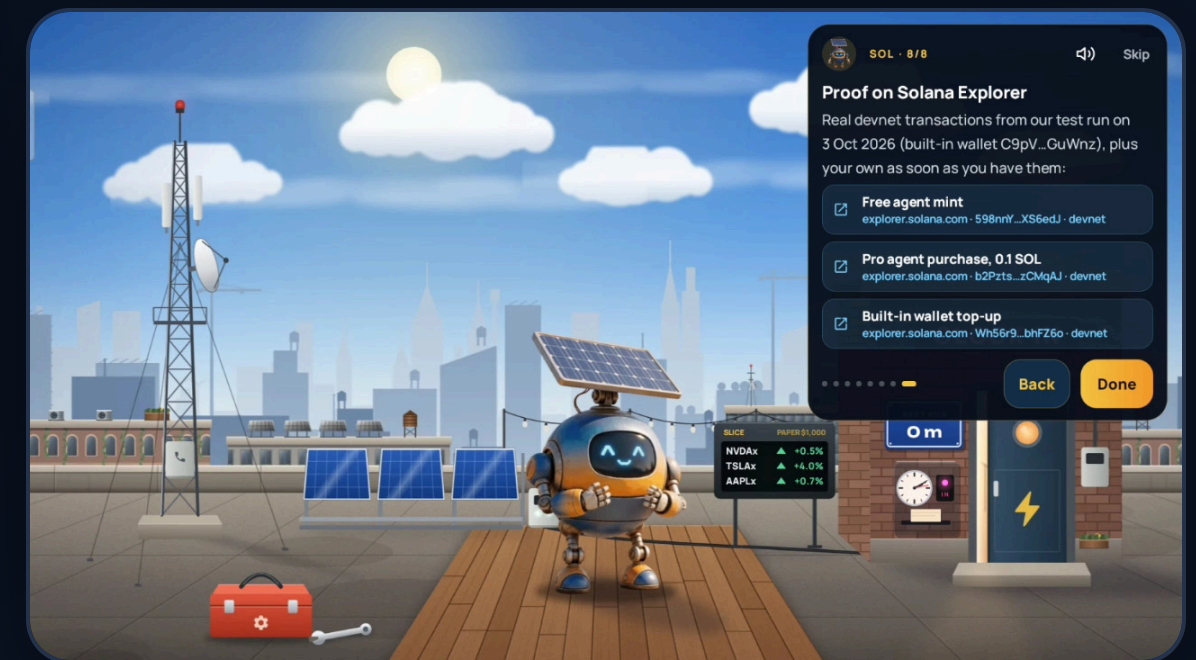

Home is a rooftop, not a dashboard

Guided tour · "Solarchik in 60 seconds", auto-play

Every stop points at the rooftop

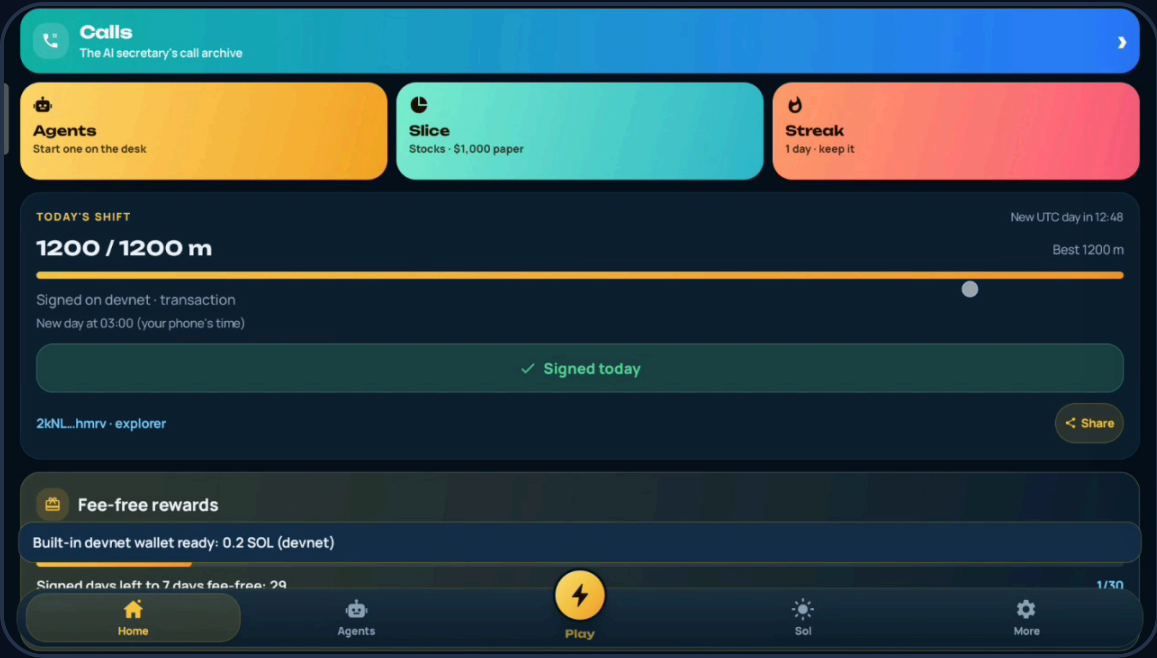

Last stop: proof links on Solana Explorer

DEMO · RUN & CLOCK IN

Run 1200 m, then sign the day

Runner · jump, dodge, grab suns

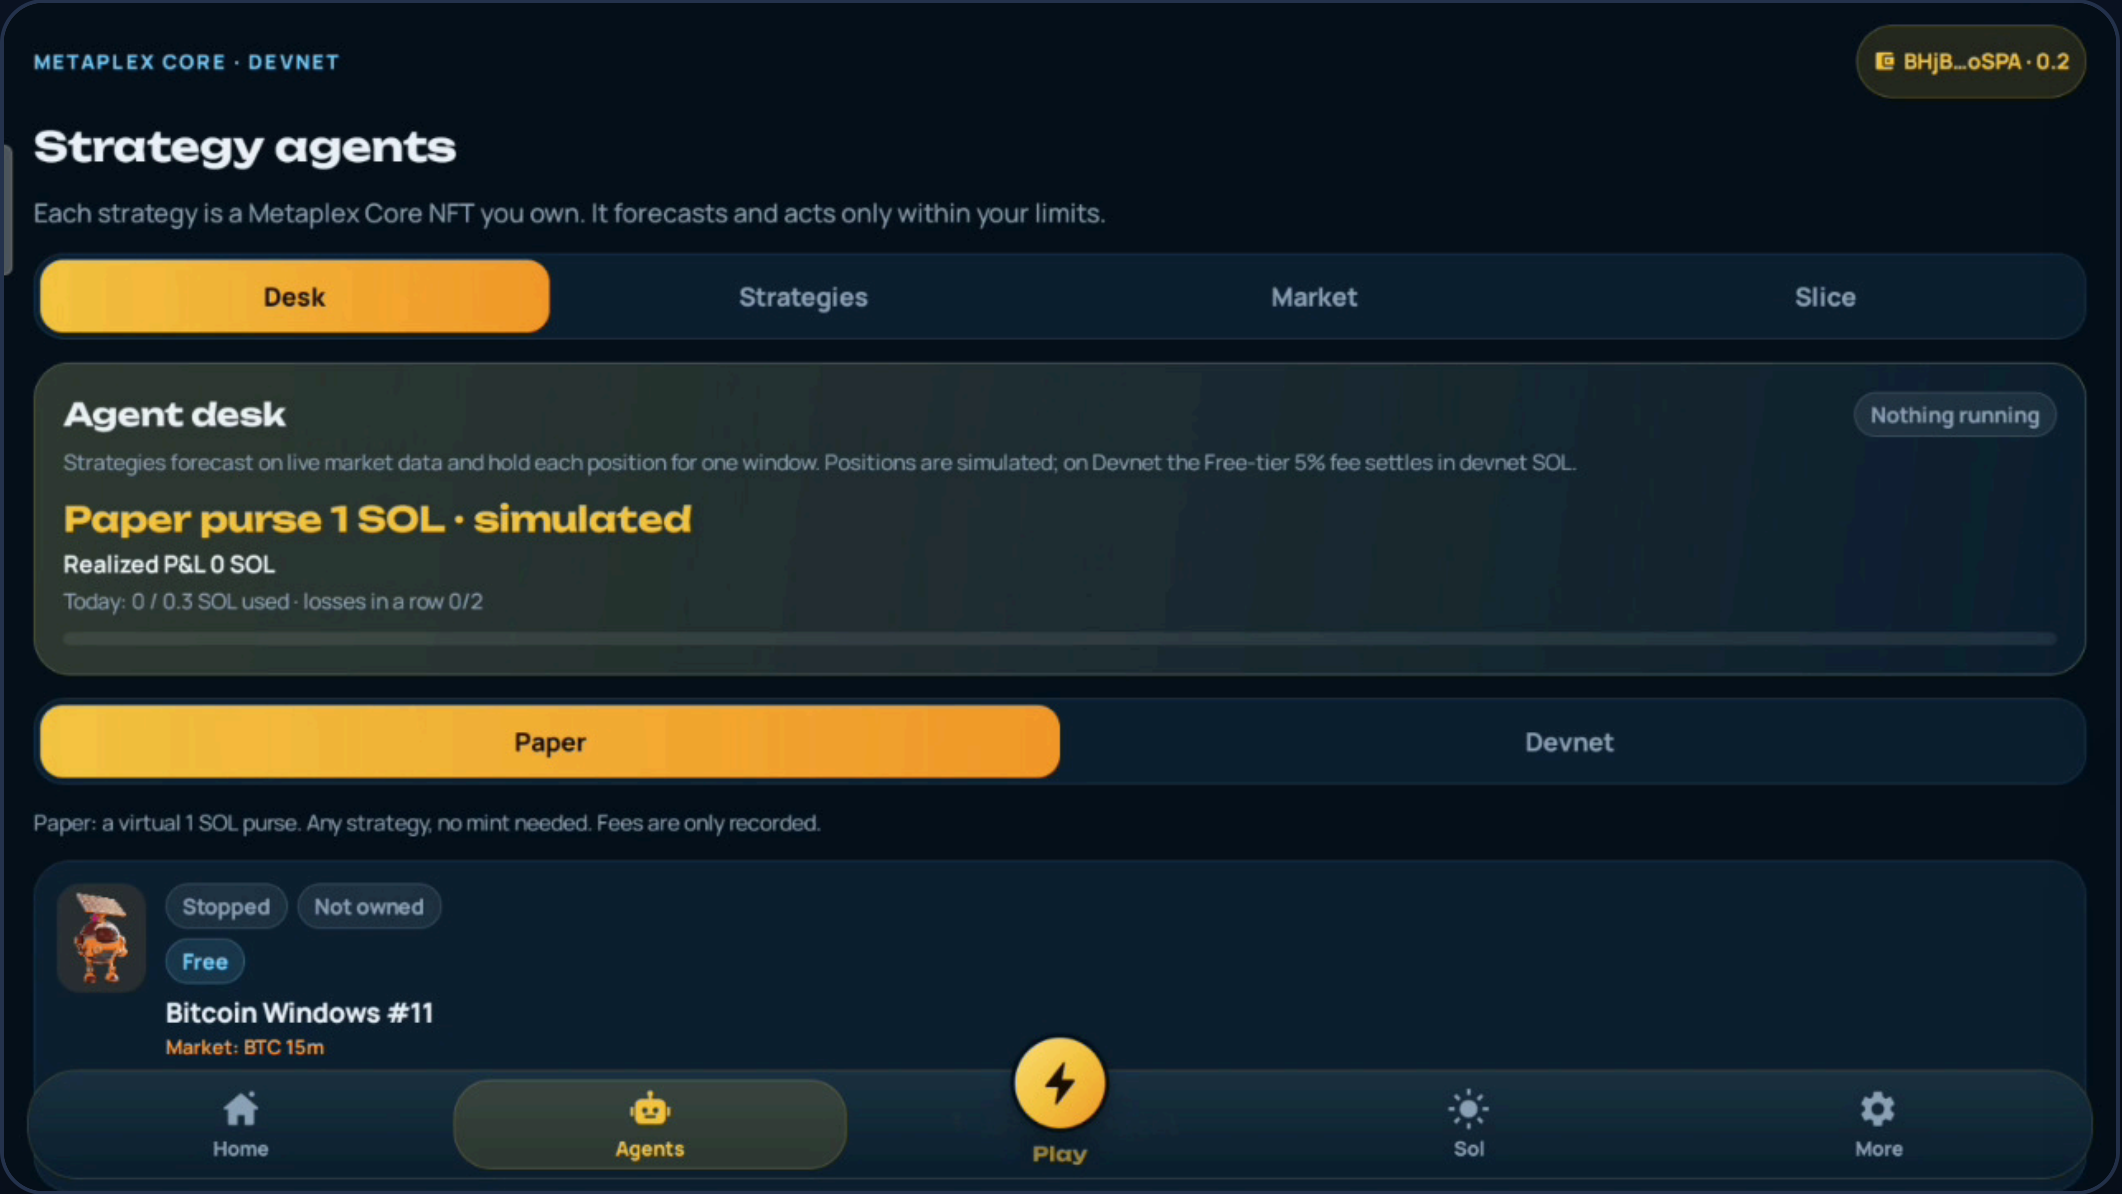

CLOCK IN signed on devnet · explorer link

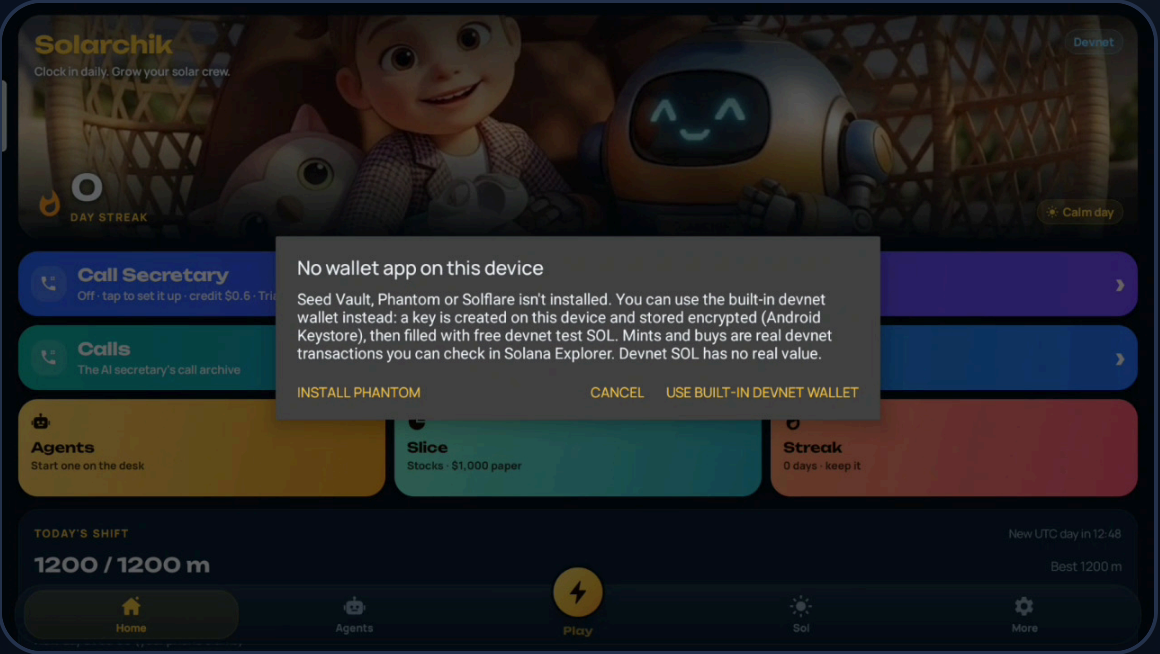

1200 m: "CLOCK IN unlocked!" · sign any time, keep running

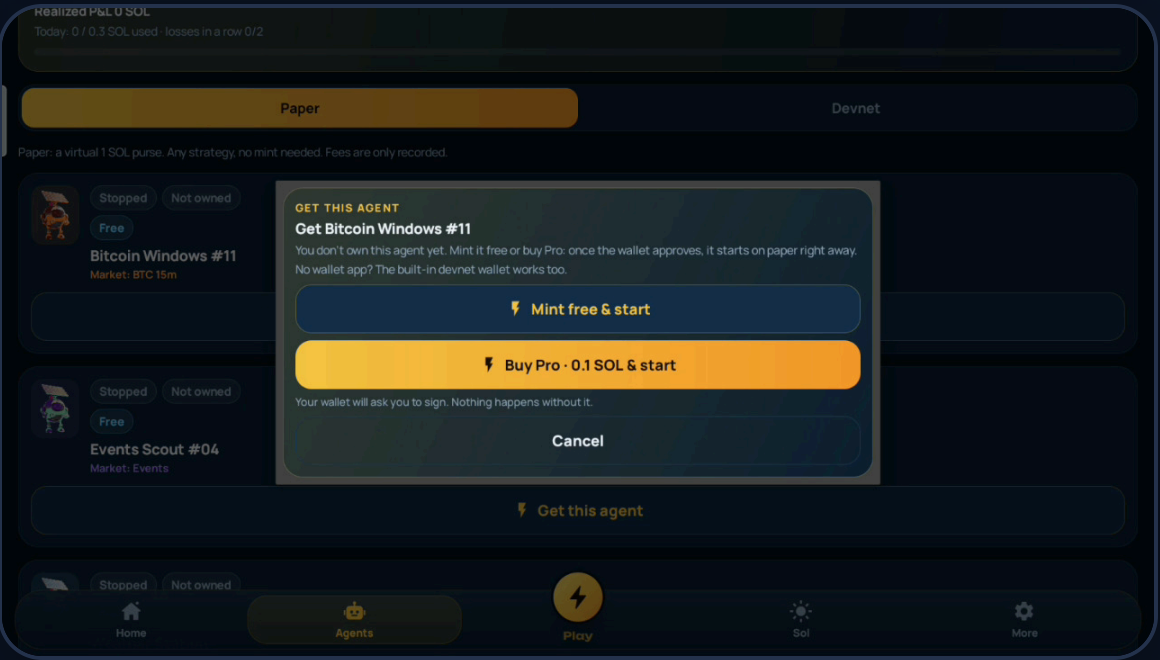

Wallet in one tap, agents as NFTs

Metaplex Core strategy agents · paper purse or devnet

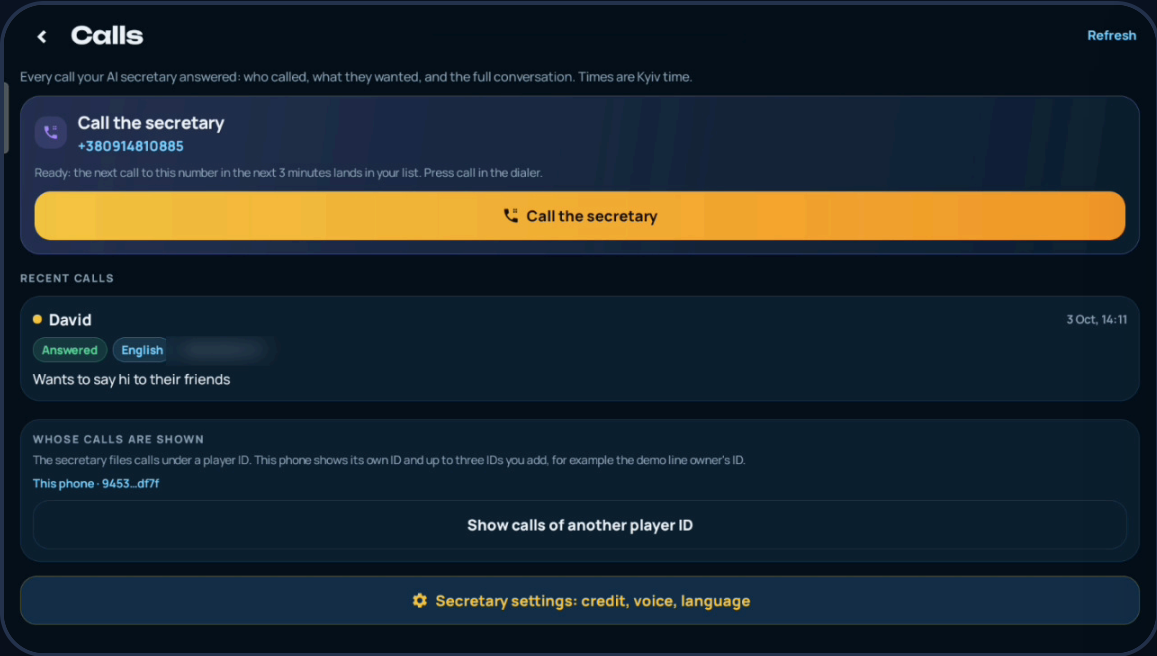

No wallet app? Built-in devnet wallet

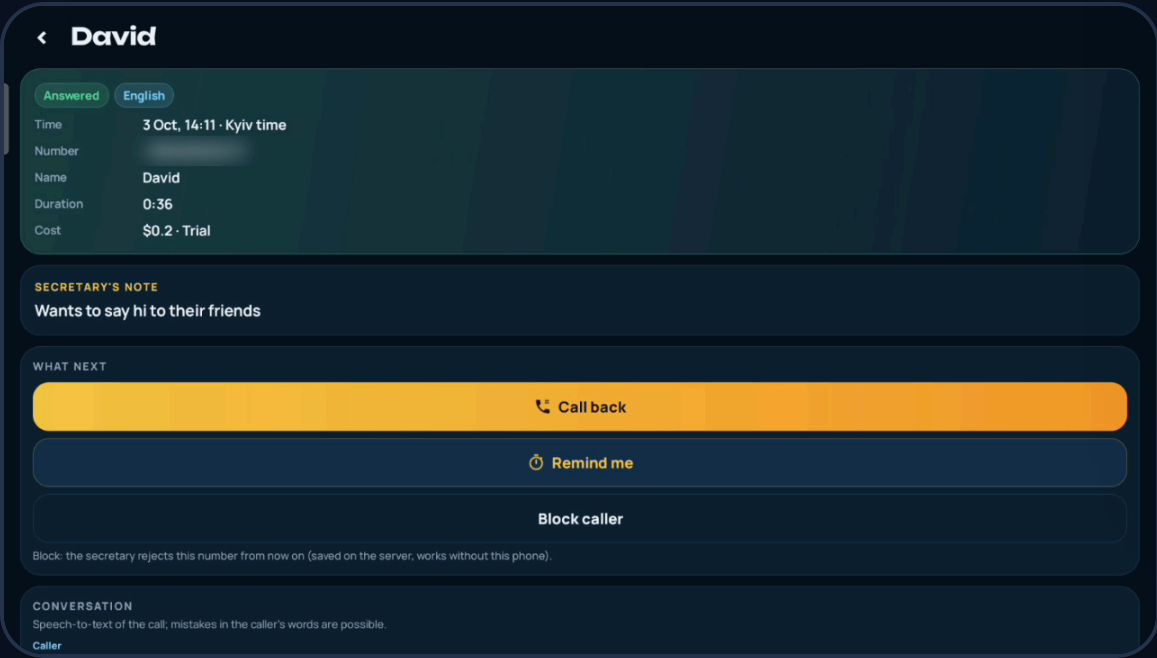

Get an agent: mint free or Pro for 0.1 SOL

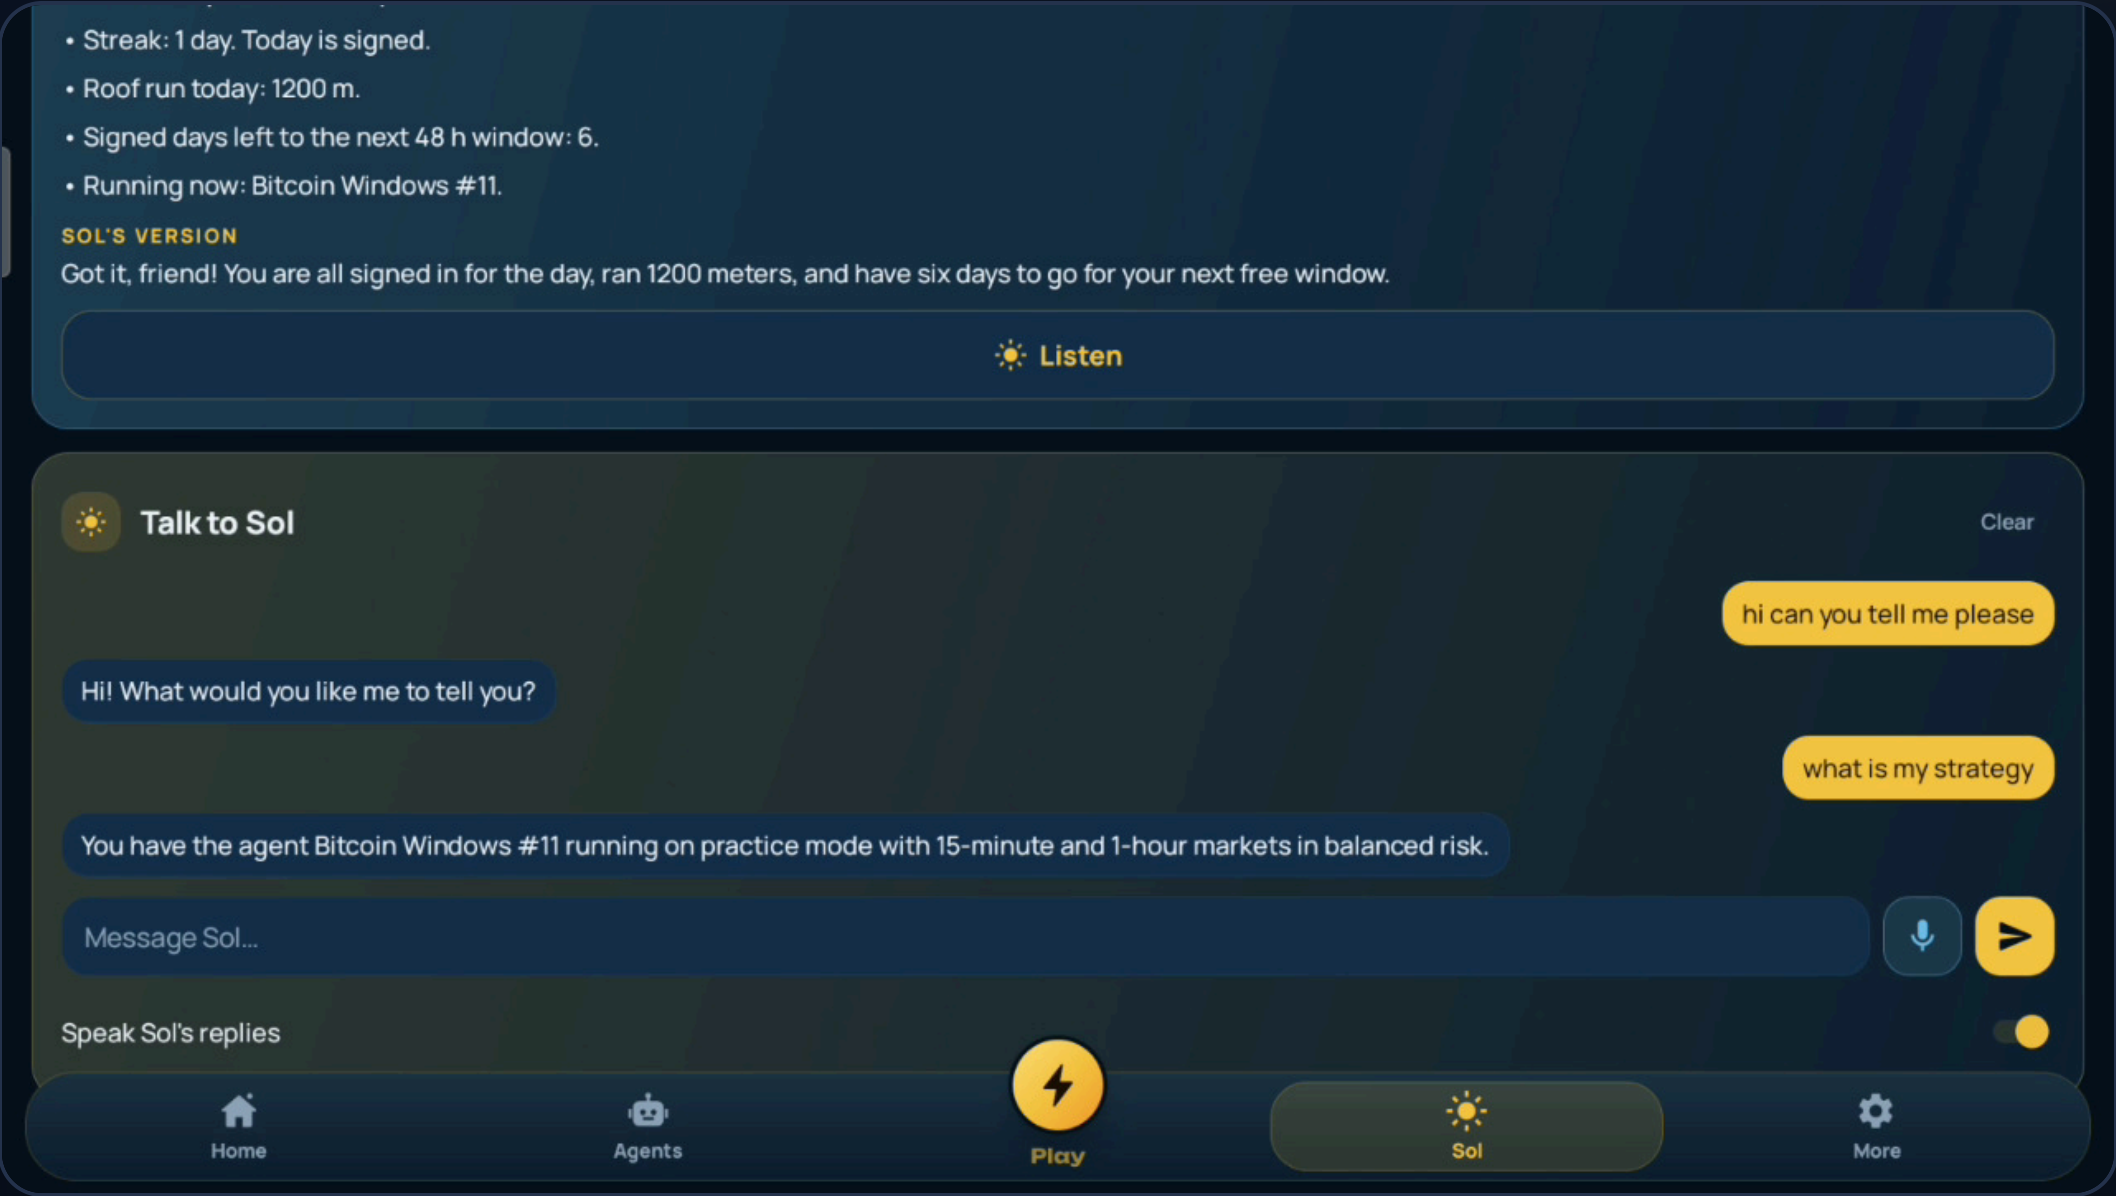

Talk to change things. Let Sol take the call.

Calls inbox · the secretary's note per call

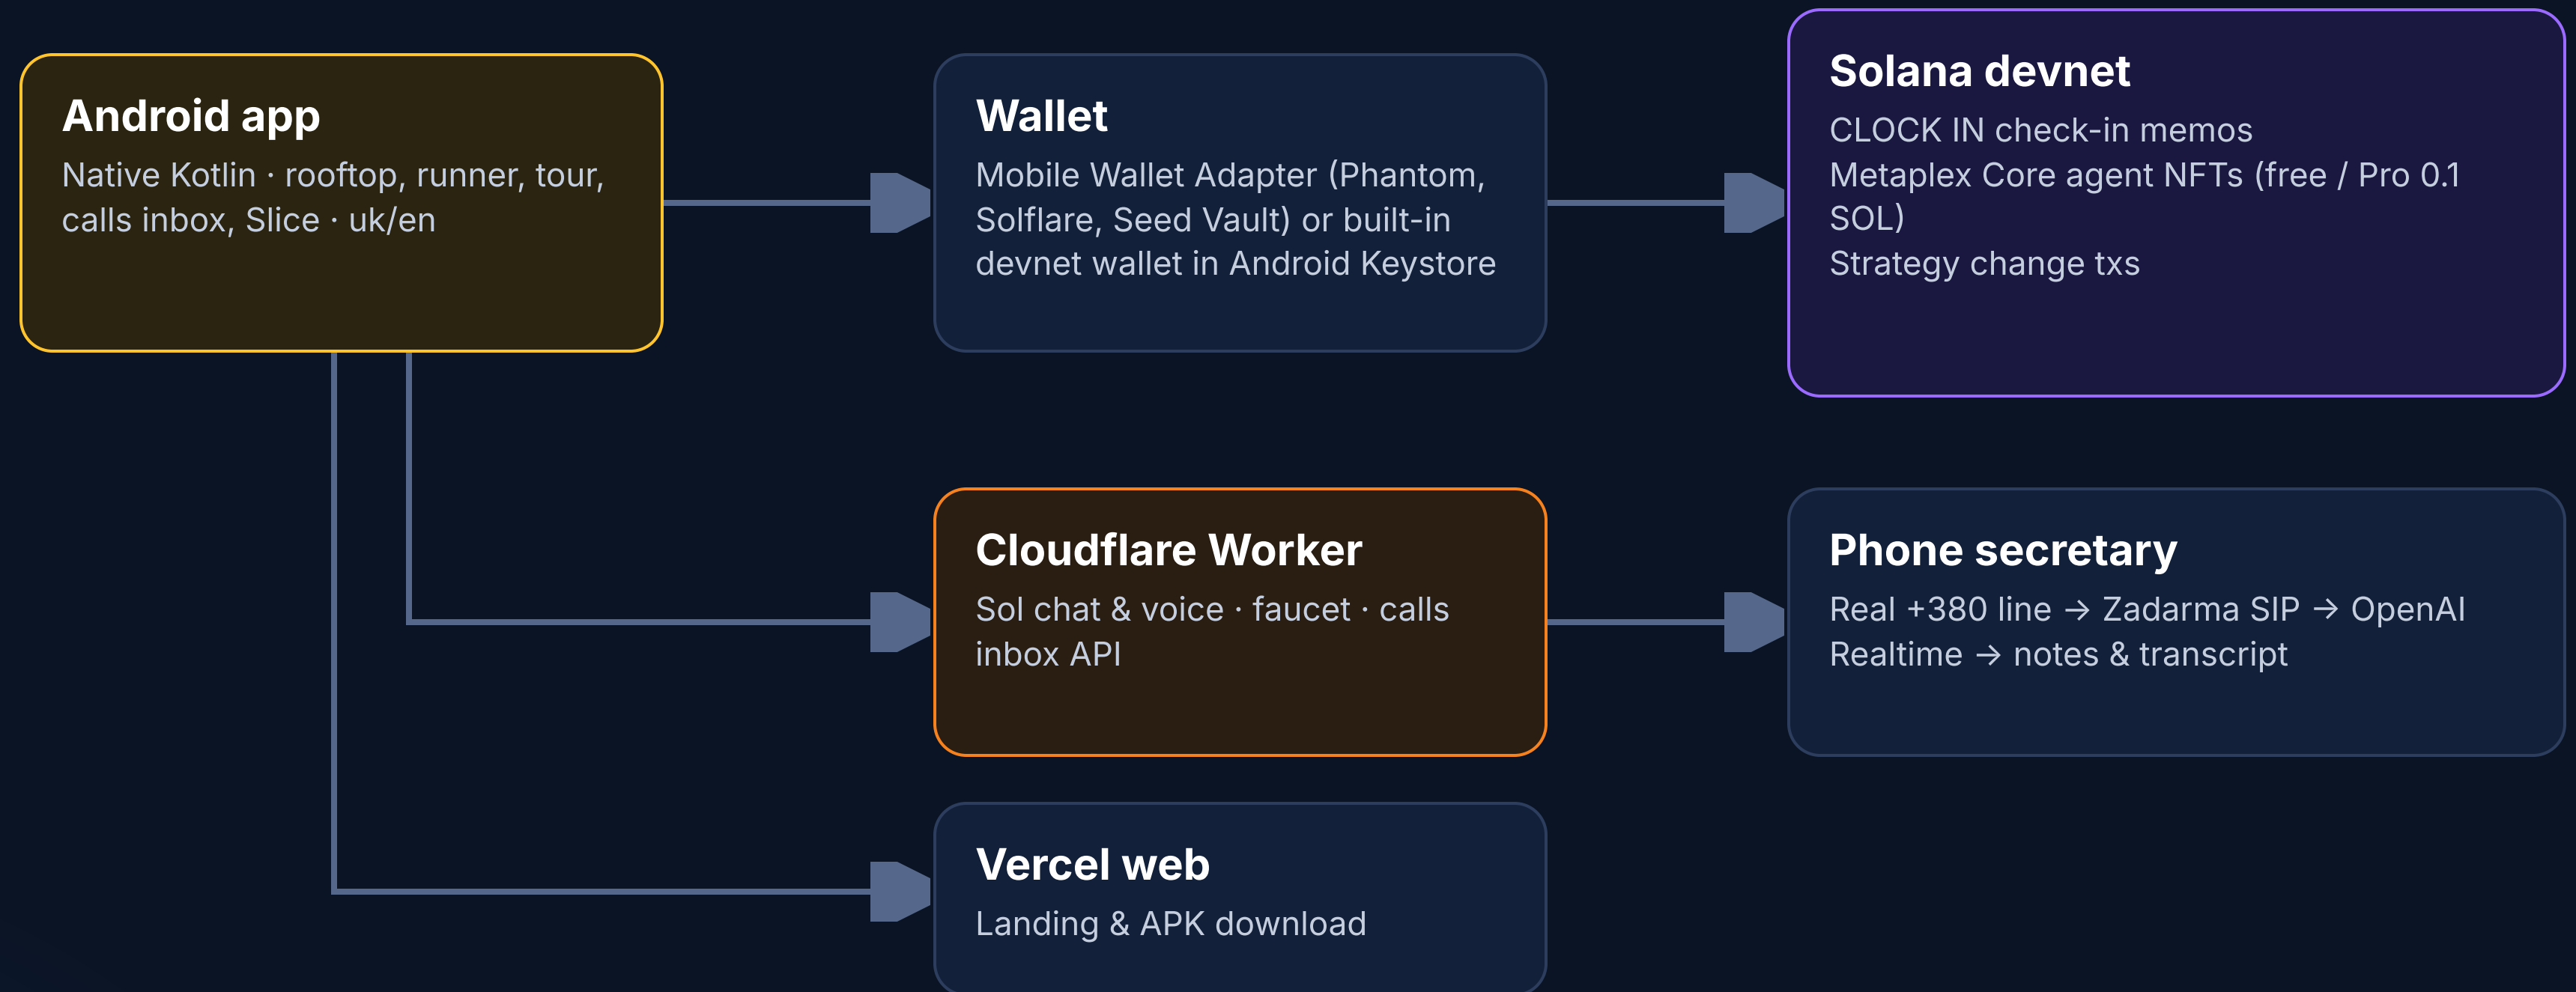

Notes, call back, remind, block

Ask Sol by voice · "What is my strategy?"

HOW IT WORKS

Architecture

ON-CHAIN PROOF

Real devnet transactions from the app code

Daily CLOCK IN (built-in wallet, finalized)	2FfPKtFz...hafpMuFL5
Free agent mint (Metaplex Core)	4ixhbEV1...UerUe9sLh7emD
Pro agent buy (0.1 SOL to treasury)	5RCh1qEA...xxhsEM6nV4Xkg7
Strategy change asked from Sol (risky, 5 min)	35PznYQb...Z7hAWy4goLsF
Wallet top-up from the Solarchik faucet	3y1uFvb9...w3euUQ3ZsL8irA4dP
Agent asset (Pro)	8ToSRXG5...8FaUqwkt

Links are clickable in this PDF. Devnet SOL has no real value; nothing here is mainnet.

WHY MOBILE · WHY SEEKER

This only makes sense on a phone

Daily habit

A check-in you do every day belongs on the device in your pocket, not on a desktop tab.

Seed Vault & MWA

Signing goes through Mobile Wallet Adapter, so Seeker's Seed Vault works out of the box.

Zero-friction start

No wallet app? A devnet key is created in Android Keystore and funded by our faucet.

A real phone number

The secretary answers real calls. That is a phone feature, full stop.

Smooth at 120 Hz

Native Kotlin rendering, not a webview — the runner is tuned for 90/120 Hz screens.

Voice first

Talk to Sol to change a strategy; you always confirm before anything is signed.

ROADMAP

What comes next

NOW

v0.22.3 on devnet

Runner, CLOCK IN, MWA +
built-in wallet, Metaplex
Core agents, Sol, phone
secretary, Slice, uk/en.

NEXT

SKR payments

Pay for secretary minutes
and Pro agents with SKR.

NEXT

Seeker holder perks

Extras for people who carry
a Seeker.

LATER

Mainnet

Only after a security audit.

Slice stays a clearly labelled paper portfolio until there is a safe, compliant way to do more.
